COLORS FOR 1938 NASH MODELS

HAVE you tried-out the newly introduced du Pont Finish — Automotive PYRALUX? Designed chiefly for touching-up synthetic resin finishes and for recoloring used cars, it combines certain desirable qualities of lacquers and synthetic resin enamels.

Automotive PYRALUX dries with a speed approximating that of DUCO and has a good initial gloss that practically eliminates rubbing. Its chalk rate is comparable to that of DULUX, thus making it a satisfactory finish both for touching-up baked synthetic enamels and for complete repainting of used cars.

It is available in Black and other popular shades. Others will be added as new colors are adopted for use by manufacturers using synthetic resin finishes. A bulletin listing the complete line of Automotive PYRALUX colors may be obtained through your distributor of du Pont Refinishing Materials or by writing to the nearest branch office.

COLOR COMBINATIONS ON NASH CARS

No color combination plate or number is shown on Nash cars. However, the Refinisher may obtain this information from the dealer who delivered the car to the original purchaser.

COLORS FOR 1939 NASH MODELS

THE chips on the right represent the colors used on 1939 Nash cars and show the corresponding DULUX and Automotive PYRALUX matches offered by du Pont.

DULUX should be used when complete refinishing is necessary; while Automotive PYRALUX is recommended for spot repair and touch-up work or overall refinishing of used cars.

Having a chalk rate comparable to that of baked synthetic enamels, Automotive PYRALUX is excellent for touching up this type of finish (used on 1939 Nashs) and—because it dries with a speed approximating that of DUCO and has a good initial gloss that virtually eliminates rubbing and polishing—it is the ideal material for touch-up work on Nash cars.

Automotive PYRALUX is obtainable in shades to match baked synthetic finishes used on all production automobiles.

How to Tint Automotive "Pyrallux" Colors

At times, it may be necessary to tint Automotive "Pyrallux" colors due to weathering of the colors on cars.

We do not offer a line of tinting colors in Automotive "Pyrallux," but "Pyrallux" may be tinted with up to 10% of "Duco" Tinting Colors.

As a guide in selecting the proper "Duco" Tinting Colors with which to tint "Pyrallux," we show the various tinting colors which would enter into the composition of matches in "Duco."

The colors are listed in accordance with the quantities needed; the largest quantity being first, the next largest quantity second, and so on. Before tinting a "Pyrallux" Color, consult the tinting colors which would produce a match in "Duco," and tint accordingly.

Nash code numbers are stamped into the Body Number Plate, which is riveted to the right side of the cowl directly back of the hood hinge, visible when the hood is raised.

NOTE—While these cars are finished in synthetic enamel, we recommend that spot touch-ups be made with DUCO.

Spanish Red	Sea Mist Gray
Champagne Ivory	Caribbean Blue

DUCO tinting colors, for the various formulas, are shown where available. These colors are listed in the order of their importance in the event that tinting is necessary.

Color code numbers appear on a plate on the right side of the fire wall under the hood.

NOTE: Most colors in this bulletin are available in both DUCO and DULUX; however, it should be noted that it is not always possible to make close matches in DUCO to DULUX colors and vice versa.

SEE OTHER SIDE FOR 1949-1950-1951 AND 1952 NASH COLORS.

	No Match	Pearl Dark Gray	NK-875
	No Match	Pearl Dark Green	NK-877

DUCO tinting colors, for the various formulas, are shown where available. These colors are listed in the order of their importance in the event that tinting is necessary.

Color combination numbers appear on a plate on the right side of the fire wall under the hood.

NOTE: Most colors in this bulletin are available in both DUCO and DULUX; however, it should be noted that it is not always possible to make close matches in DUCO to DULUX colors and vice versa.

Every possible precaution is taken to provide the refinish trade with accurate DUCO and DULUX color matches. Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels.

	No Match	Pearl Dark Gray	NK-875
	No Match	Pearl Dark Green	NK-877

DUCO tinting colors, for the various formulas, are shown where available. These colors are listed in the order of their importance in the event that tinting is necessary.

Color combination numbers appear on a plate on the right side of the fire wall under the hood.

NOTE: Most colors in this bulletin are available in both DUCO and DULUX; however, it should be noted that it is not always possible to make close matches in DUCO to DULUX colors and vice versa.

Every possible precaution is taken to provide the refinish trade with accurate DUCO and DULUX color matches. Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels.

† "For Touch-Up Only." Not recommended for panel repair or over-all refinishing.

NOTE: Colors assigned "Z" suffix carry a special price. Consult your Distributor of Du Pont Refinishing Materials.**ORDER ONLY BY "DUCO" STOCK ORDER NUMBER****INTERIOR COLORS**

DUCO Stock Order Number	Color
2379-H	†Polo Green
2383-H	†Pacific Blue

†Also used as exterior colors.

NOTE: A Du Pont mixing machine formula for DUCO Lacquer only will be available for the following 1956 Interior Colors:

Formula File Number	Color
59818	Golden Brown
No Match	Silver Gray Metallic

DUCO tinting colors, for the various formulas, are shown where available. These colors are listed in the order of their importance in the event that tinting is necessary.

Color combination numbers appear on a plate on the right side of the firewall under the hood.

NOTE: Most colors in this bulletin are available in both DUCO and DULUX; however, it should be noted that it is not always possible to make close matches in DUCO to DULUX colors and vice versa.

Every possible precaution is taken to provide the refinish trade with accurate DUCO and DULUX color matches. Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels and lacquers.

INTERIOR COLORS

DUCO Stock Order Number	Color	Part No.
2512-H	†Cinnamon Bronze Metallic	N-72
2772	†Medium Blue Metallic	N-81
2773	†Medium Green Metallic	N-80

†Also used as exterior colors.

NOTE: Where semi-gloss is required, addition of #4528 Flattening Compound is recommended in accordance with label directions.

Color combination numbers appear on a plate on the right side of the firewall under the hood.

NOTE: The colors in this bulletin are available in DUCO with a few matches in DULUX; however, it should be noted that it is not always possible to make close matches in DUCO to DULUX colors and vice versa.

Every possible precaution is taken to provide the refinish trade with accurate DUCO and DULUX color matches. Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels and lacquers.

■A Du Pont mixing machine formula for DUCO Lacquer is available in quantities of a pint and upwards.

NOTE: Where semi-gloss is required, addition of #4528 Flattening Compound is recommended in accordance with label directions.

Color combination numbers appear on a plate attached to the wheel house on the right side of the firewall under the hood.

NOTE: The colors in this bulletin are available in DUCO.

Every possible precaution is taken to provide the refinsh trade with accurate DUCO color matches. Due to circumstances beyond our control, we cannot be responsible for inaccurate color matches resulting from changes in standards by automobile manufacturers without our knowledge, change of car colors on aging, and color variances caused by application methods, etc. We will assume responsibility only for factory color matches to established Du Pont color standards.

As the accuracy of color matches made with the Du Pont Color Blending Service depends on the individual operating the equipment, we will assume responsibility only for the uniformity of our mixing enamels and lacquers.

Briarcliff Grain Black

DIA-9352

DIRECTIONS FOR APPLICATION OF GRAIN BLACK

Wash surface thoroughly with DX-440 Wax and Grease Remover. Scuff sand existing color with 320 grit paper or finer. Blow off with clean air and tack rag surface.

Reduction: Thin DIA-9352 10-15% (one pint of DTL-16 to one gallon of DIA).

Spray one coat over all primed areas and let flash off for 5-10 minutes.

Spray two coats over entire area allowing 10 minutes flash off between coats.

Air Pressure: 60 lbs. at gun.

Distance from work: hold gun 12-14 inches from surface when spraying between 60°-80°F.

Texture can vary depending on temperature but can be maintained by moving gun closer in at temperatures in excess of 80°F and move farther back when temperature is below 60°F.
